RE: Discontinuation of Spectrex 20/20SI Flame Detector

The Spectrex 20/20SI IR3 Flame Detector is no longer in production and has been replaced by the 40/40I IR3 Flame Detector. The 20/20 design is almost 20 years old and electronic components have improved as industry certificate requirements have become more demanding.

The 40/40 series is the next generation of flame detection with improved sensors and updated technology. The 40/40 series improvements include 5 year warranty, HART, SIL2 approval, improved temperature range, increased cone of vision in a lighter and more compact design.
