

Jem Mall Employs SharpEye Mini Detectors

The small and compact 20/20MI IR3 flame detector that is almost unnoticeable and able to detect a wide area is the perfect solution for commercial applications, such as shopping malls. The large field of view allows a small number of detectors to be installed for a large area.

The Jem Mall in Singapore has recently employed the 20/20MI detector, benefiting from fast, long distance, accurate flame detection at distances of up to 133ft (40m). The 20/20MI has the highest immunity to false alarms, including sunlight entering from large windows.

For more information about the 20/20MI, please click [here](#). Another solution for commercial, indoor applications is the 20/20MPI, please click [here](#) for more information.
